

**Amendments to the Claims:**

The listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1. (Currently Amended) An imaging element comprising in order  
a support;  
a light sensitive image forming unit comprising microcapsules and a  
developer;  
an inner protective overcoat layer; and  
an outer protective overcoat layer, wherein the outer protective overcoat  
layer has a modulus ratio to the inner protective layer of greater than 1.2.
2. (original) The imaging element of claim 1 wherein the imaging  
element is light sensitive and pressure developable.
3. (original) The imaging element of claim 1 wherein the inner  
protective overcoat layer has a modulus of less than 3 Gpa.
4. (original) The imaging element of claim 1 wherein the outer  
protective overcoat layer has a modulus greater than the modulus of the inner  
protective layer.
5. (Cancelled)
6. (original) The imaging element of claim 1 wherein the inner  
protective overcoat layer comprises a hydrophilic colloid.
7. (original) The imaging element of claim 6 wherein the inner  
protective overcoat layer further comprises a cross-linker.
8. (original) The imaging element of claim 6 wherein the inner  
protective overcoat layer further comprises a water dispersible resin.

9. (original) The imaging element of claim 6 wherein the inner protective overcoat layer further comprises a UV absorbing material.
10. (original) The imaging element of claim 1 wherein the outer protective overcoat layer has a modulus of greater than 3 Gpa.
11. (original) The imaging element of claim 1 wherein the outer protective overcoat layer comprises a binder and a lubricant.
12. (original) The imaging element of claim 11 wherein the outer protective overcoat layer further comprises a cross-linker.
13. (original) The imaging element of claim 11 wherein the outer protective overcoat layer further comprises a stiff filler.
14. (original) The imaging element of claim 1 further comprising at least one non-imaging layer comprising a hydrophilic colloid located between the support and the image forming unit.
15. (original) The imaging element of claim 14 wherein the hydrophilic colloid of the non-imaging layer is gelatin.
16. (original) The imaging element of claim 14 wherein the non-imaging layer further comprises a water dispersible resin.
17. (original) The imaging element of claim 14 wherein the non-imaging layer further comprises a cross-linker;
18. (original) The imaging element of claim 1 further comprising an antistatic layer.
19. (original) The imaging element of claim 18 wherein the antistatic layer is on the opposite side of the support from the imaging unit.
